HazRunoff Workshop
Vigo, 01-02-2019

Spanish Marine Pollution Emergency Response

**RESPONSE NATIONAL
SYSTEM**

RD1695/2012 - Enero 2013

MARINE SUBSYSTEM

COASTAL SUBSYSTEM

**Orden
FOM/1793/2014
- Septiembre
2014**

**NATIONAL MARINE
PLAN**

**NATIONAL SHORELINE
PROTECTION PLAN**

**Orden
AAA/702/2014 -
Mayo 2014**

Plan CAMGAL

**Decreto 135/2016 -
Octubre 2016

Resolución 28 de
Septiembre**

INTERIOR PLANS

LOCAL PLANS

Plan CAMGAL

- Chapter I. **General**
- Chapter II. **Support Information**
- Chapter III. **Organizational structure**
- Chapter IV. **Activation**
- Chapter V. **Procedures for action**
- Chapter VI. **Implementation**
- Chapter VII. **Local Plans and Interior Plans**
- Chapter VIII. **Validity**
- **ANNEXES**

SUPPORT UNITS:

- Unit of Documentation and Scientific Support
- Unit of Close Surveillance

<http://www.intecmar.gal/Novas/camgal/>

MARINE ENVIRONMENT

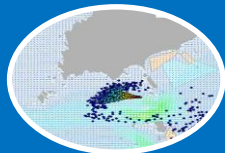

END USERS

Observation

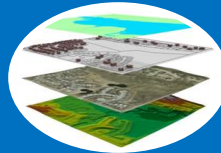

- Mooring Platforms
- Meteo Stations
- Radar HF
- CTD profiles
- Coastal Drifters

Models

- Operational models
 - Atmospheric
 - Hydrodynamic
 - Waves
- Lagrangian models
 - Oilspill,...

Geomatics

- SDI
- OGC protocols
- Inspire
- Data modelling
- Gadgets

Information

- Contingency plans
- Risk Analysis
- EU Directives
- End user tools

Projects:

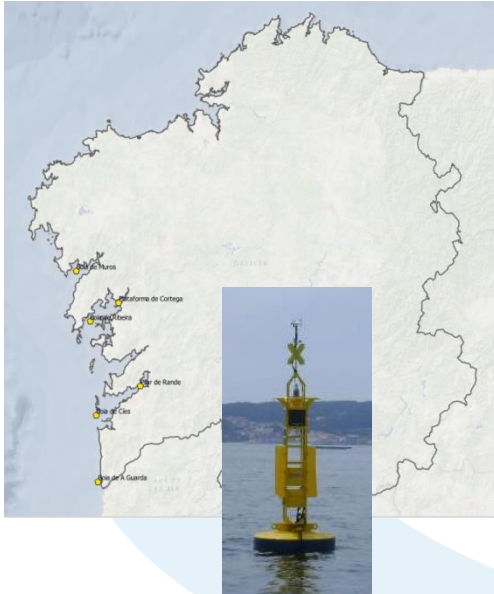

ARCOPOL series, EASY series, RAI series, DRIFTER, MARINER, MARRISK, MYCOAST, CLEANATLANTIC

Observation Network

AUTOMATIC PLATFORMS

- 6 mooring platforms

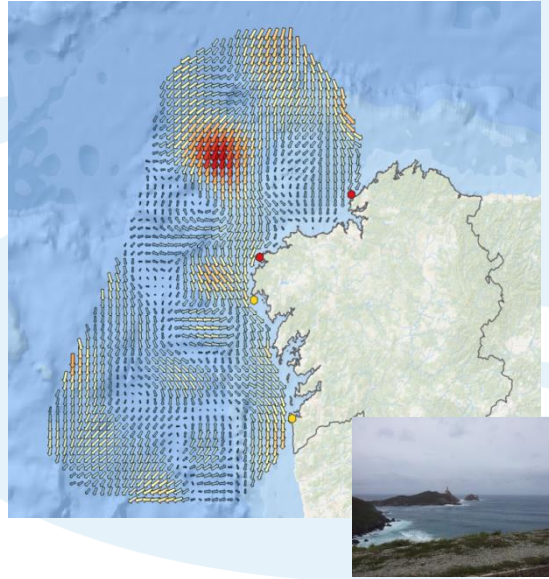

Intecmar, MeteoGalicia, CETMAR

HF Radar

- 4 Stations

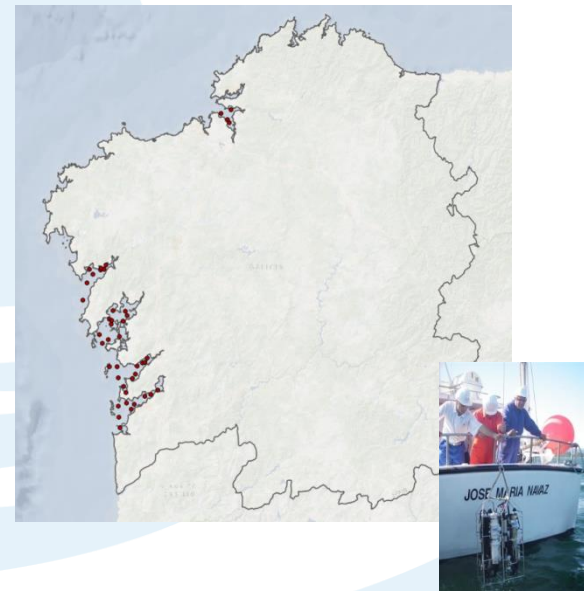

Intecmar, PdeE

CTD

- 43 weekly stations

Intecmar

Model applications

- Based on **meteo**galicia Operational Models

INTECMAR: Simulations on demand

Waves: SWAN
(Res: Up to 50 m)

Meteorology: WRF
(Res: Up to 1 km)

Hydrodynamic:
ROMS and MOHID
(Res: Up to 300 m)

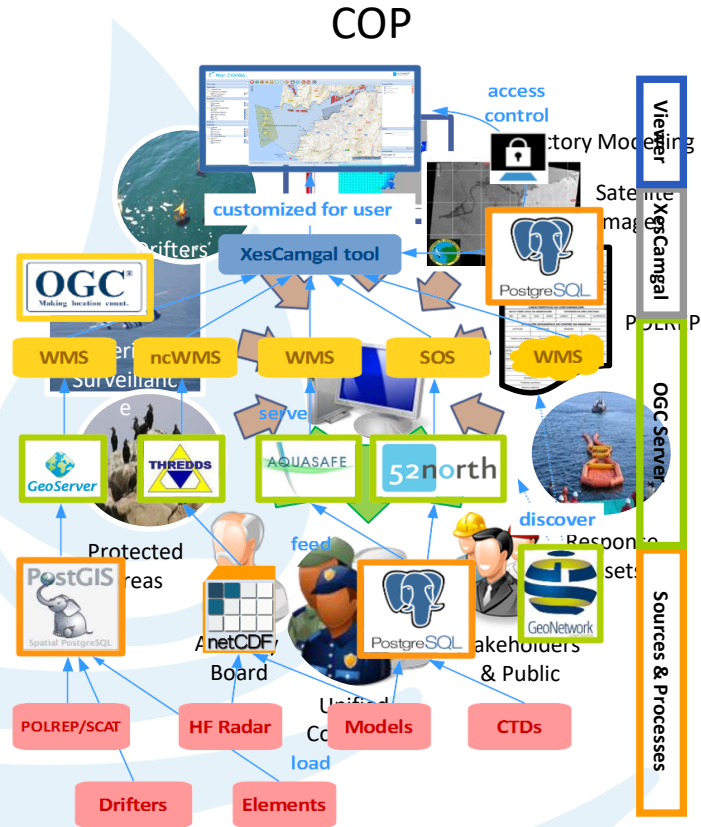

Run everyday

Finer resolution

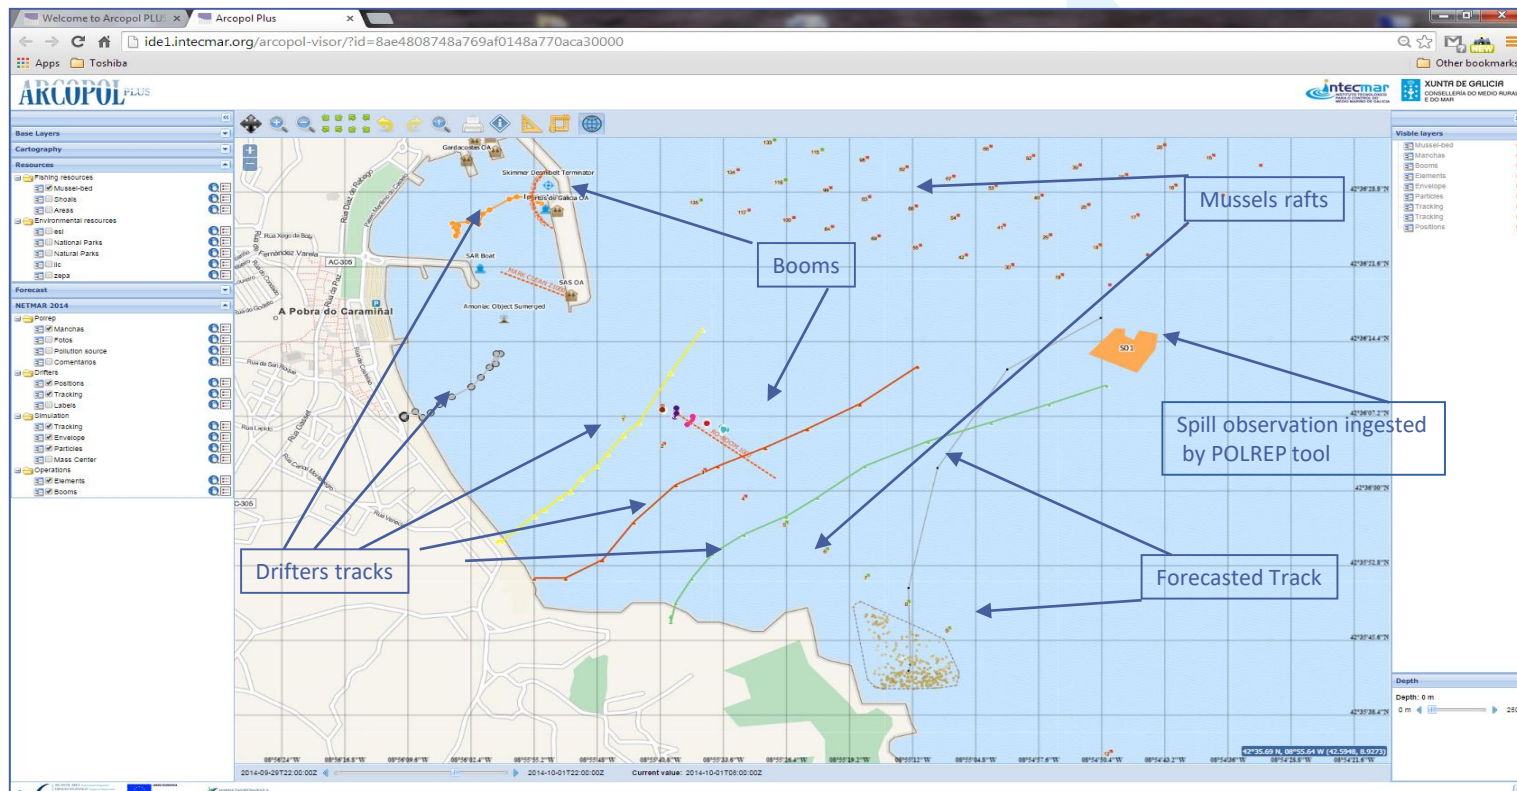

Lagrangian
models for
spills,...

Eulerian models
for pollution,...

- ers of COP have access to
information based on access
- en Source, OGC protocols
CW) and INSPIRE Directive

Plan Camgal Viewer: <http://mapas.intecmar.gal/plancamgal>

Supporting Galician Coast Guards: Exercises

Boiro 2013

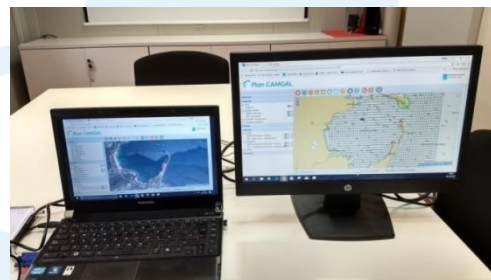

Netmar 2014

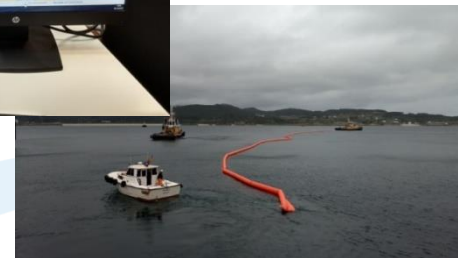

National Exercise POLEX2017

Cangas 2016

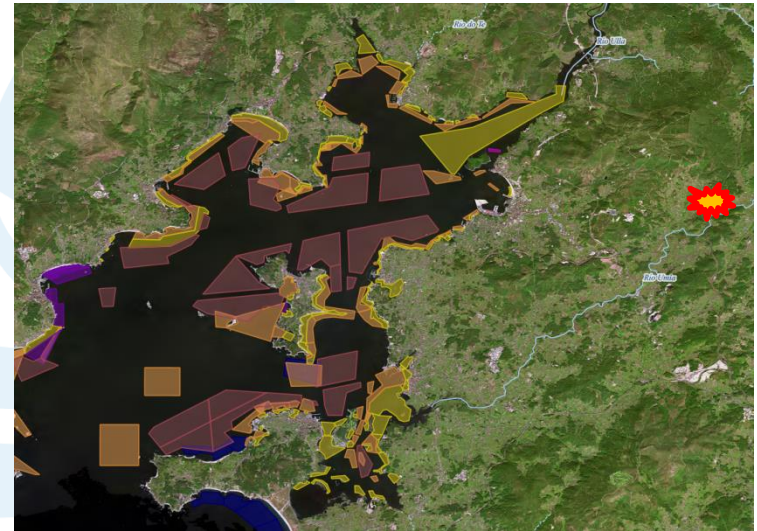

San Cibrao 2017

Case: Brenntag Chemical plant fire (2006/09/1)

- A fire broke out in a Chemical plant in Caldas de Reis, upstream of the Umia River.
- Several HNS were released to Umia.
- A monitoring survey to be prepared to the pollution into the sea, near shellfish banks.
- Coastal model was used to forecast the affected area

Case: Brenntag Chemical plant fire (2006/09/1)

Finally, the pollution didn't arrive to the coast.

Needs:

- Which HNS and its behaviour. Risk analysis and list of substances
- When and where the pollution was arriving into the sea: River model
- Outflow and pollution concentration: Pollution model
- Dispersion in the ria and affected area: Monitoring, modelling. Coupled model.

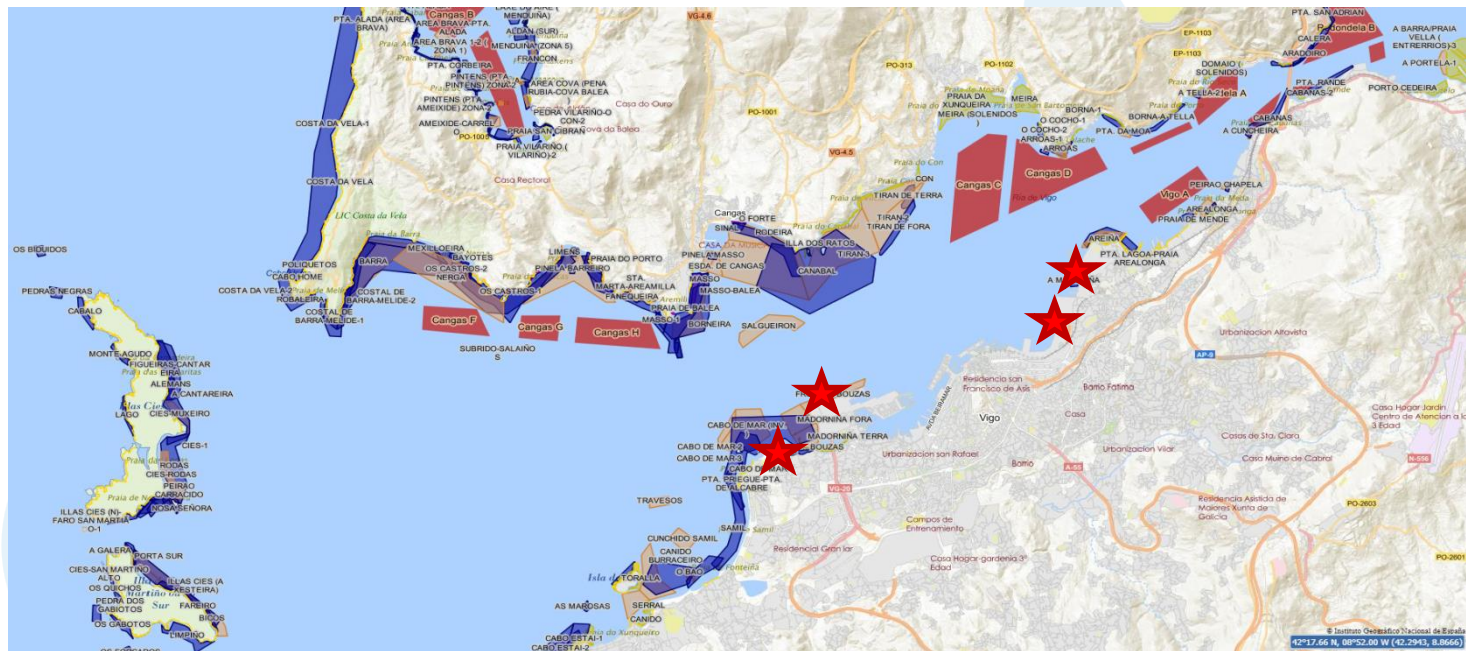

Case: Forest fires in Galicia (2006 and 2017 summers)

- Every summer there are several forest fires in Galicia, but 2006 and 2017 were extreme.
- In autumn, floods because of the eroded soil
- Ashes are swept away by the rain.
- Ashes were very dangerous for shellfish banks by choking hazard.
- Needs:
 - Inventory of likely discharges locations
 - Modelling and monitoring

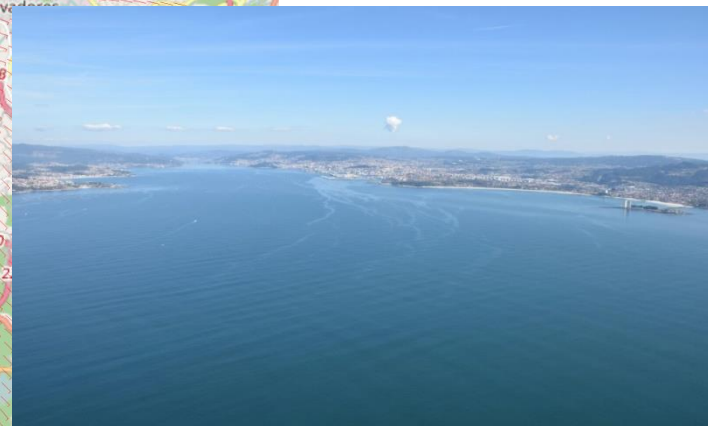

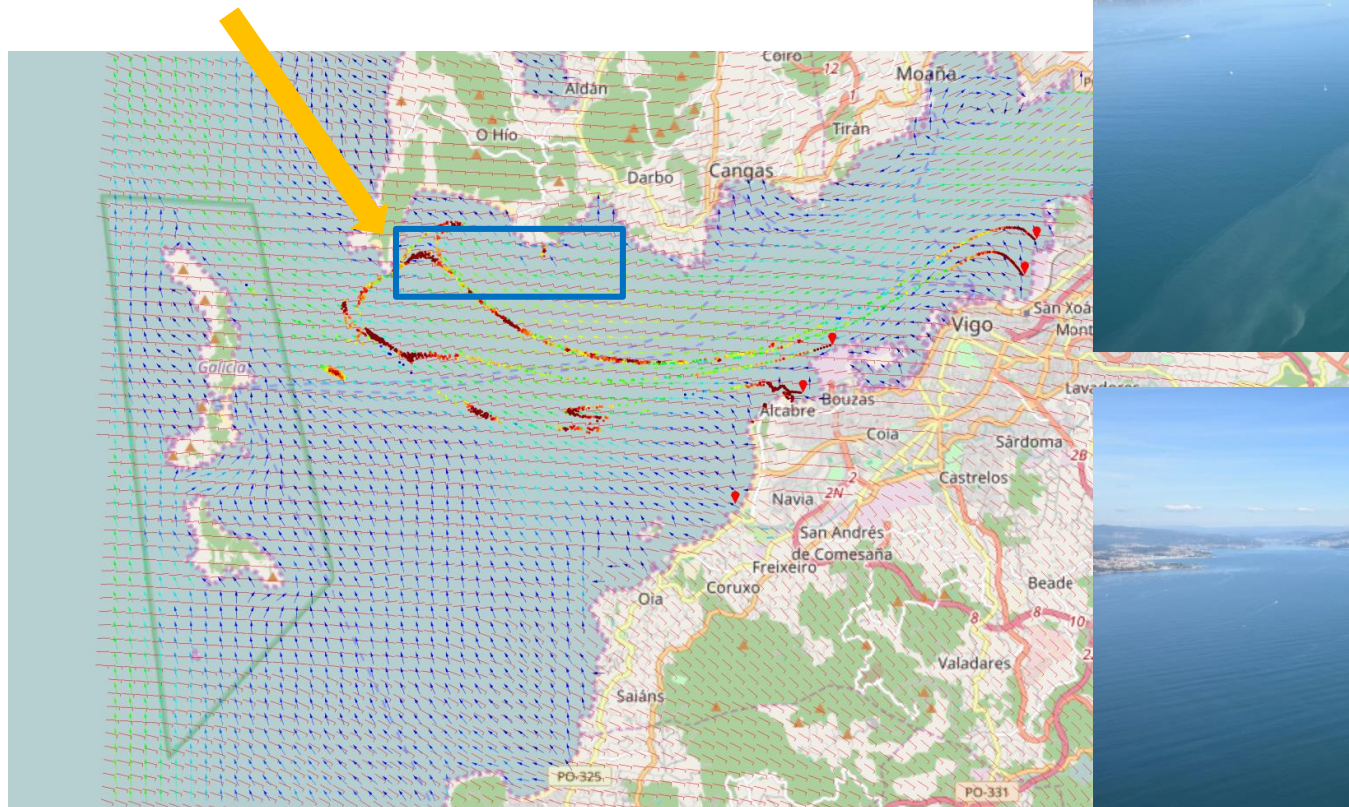

Case: Monitoring design (2017/02/16)

Faecal release at 4 points due to initiate the new sewage treatment plant.
Which shellfish area will be affected in order to monitor first?

Case: Monitoring design (2017/02/16)

High Level of Ecoli concentration

Other cases:

Heating boiler of a High School
Corcubion 2016

Vandalism,
Vilaxoan 2013

Sabotage ,
Ribadeo 2013

Vegetable debris
Illa de Arousa, 2018

Drains study for FDA,
Aldán 2015

Needs

- Inventory of the outflows and likely places of drains.
- List of priority substances, behaviour and fight.
- Modelling to answer:
 - When?
 - Where?
 - Flow?
 - Concentration? Hazard? Affected area?
- Interoperability with actual COPS.
- Satellite and aerial images to support monitoring.

Thank you!
